

TAPE-IN HAIR EXTENSIONS APPLICATION INSTRUCTIONS

PREPARATION:

- Shampoo with a clarifying shampoo to remove any hair products and/or natural oils. Avoid using hair conditioners.
- Dry hair thoroughly and do not apply any styling products in order to maximize the effectiveness of the adhesive pads.
- Map out your hairstyle and determine how many sections your design will require.

APPLICATION STEPS:

1. Start by sectioning the hair at the nape and prepare to apply extensions in a bricklayer pattern.
2. Section a 2" wide lock of hair (the same width as the adhesive pad). The quantity of hair will depend on hair type and density, but 1/8" will be adequate.
3. With the adhesive side of the pad facing up, apply the extension close to the scalp. Allow approximately 1/8" of space from the scalp for comfortable movement of the extension.

NOTE: Leave at least 1" of space between the hairline and the front edge of the adhesive pad, and do not apply extensions above the crown. It is very important to maintain clean lines and sections.

4. Position another extension directly on top of the one in Step 3 (with adhesive side facing down) and firmly press the two pads together.
5. Repeat steps 2-4, starting from the bottom to the top in a brick-layer pattern.
6. After you complete the application of all the extensions, be creative and style as desired.
